

Solo — one harness, two agents

One page every morning — everything relevant to your life, ranked, in 10 minutes. A digest that knows you're building a **pathology AI company (MedMorphIQ)**, interning at **Intel on multi-agent LLM frameworks**, and tracking **20VC portfolio companies** — across Gmail, iMessage and calendar. At the bottom: **who to reach out to today, and why**, bridging into the outbound engine.

01 What I'm Building

02 How a Morning Run Works

03 The Four Pillars

PILLAR 1

The Agent Loop

The harness drives the agent — it never calls the model directly.

reason → tool call → dispatch ↺ done

8
MAX_TURNS

32k
TOKEN BUDGET

120s
WALL CLOCK

PILLAR 2

Tools

Every source & action is a typed tool. **Errors are data, not crashes.**

Schema → Executor → {ok, data, error}

search_news

read_gmail

enrich_contact

draft_email

send_email 🔒

PILLAR 3

Guardrails

Three layers, named constants in `guardrails.py` — not in prompts.

INPUT
drop <0.4 · dedup 48h · cap 24k · allow-list domains

↓

ACTION
allow-listed tools · send needs token · max 10 enrich

↓

OUTPUT
citations required · schema validated

PILLAR 4

Observability

Every call emits a trace span → **Langfuse**. Replay any run, score quality.

p95 latency

\$ / run cost

err % rate

eval pass rate

CRITICAL guardrail violation → hard block HIGH

hallucination → strip + re-run

04 Tech Stack

 FRONTEND Next.js + Tailwind (two-tab UI)	 BACKEND Python + FastAPI
 LLM Claude Sonnet 4.6 (Anthropic API)	 TRACING OpenTelemetry → Langfuse
 STORAGE SQLite (checkpoints, runs)	 SCHEDULER APScheduler (7AM daily)
 SEARCH Exa (semantic) + Tavily (real-time)	 INBOX Gmail MCP + iMessage chat.db
 CALENDAR Google Calendar MCP	 RSS 20VC + Substack (curated)
 JOBS InternList, GitHub, Handshake, Exa	 ENRICH People Data Labs + Hunter.io

One harness · two agents · four pillars
