

AI Driven Acceleration of Images to Intelligence!

Rishik Kolpekwar

Founder & CEO

AI-powered pathology workflow optimization

for faster, more accurate, and more consistent cancer grading.

THE PROBLEM

Pathologists are overwhelmed by manual biomarker quantification — highly subjective, time-intensive, and inconsistent — creating critical bottlenecks in cancer diagnostics.

THE SOLUTION

MedMorphIQ deploys **patented deep-learning AI** to automate biomarker quantification — starting with the **highly precise Ki-67 module** and scaling across oncology diagnostics with AI at the core of every analysis.

HOW IT WORKS

- 1 **AI vision models** analyze high-resolution pathology images to precisely compute Ki-67 proliferation index — in seconds
- 2 **Expert supervision** validation — pathologist review always required before any output is used
- 3 AI-generated reports seamlessly integrate into existing lab workflows — structured, auditable, and ready for pathologist sign-off

WHY IT MATTERS

- ✓ Faster turnaround times in cancer diagnostics
- ✓ More consistent, standardized quantification across institutions
- ✓ Supports—not replaces—clinical decision-making

BUSINESS MODEL

SAAS

Subscription platform with recurring revenue per lab or institution

REVENUE SHARE

Channel partnerships with lab networks and healthcare platforms

SCALABLE

No heavy sales overhead — grows through ecosystem embedding

Proven in Practice

Core technology protected by a **granted U.S. patent**, validated through peer-reviewed research published at the **American Society of Cytopathology**, and actively deployed on real patient workloads across global institutions.

TRACTION AT A GLANCE

5

Institutions on live patient workloads

IP

Protected

Granted U.S. patent — strong defensive moat

1st

Place, 2026 TEWH Healthcare Innovation

ASC

Peer-reviewed cytopathology publication

DEPLOYED ON REAL PATIENT WORKLOADS

- Wayne State University
- ESI Medical College
- GKNM Coimbatore
- Maitri Diagnostics Lab
- Institute of Surgical Pathology Nagpur

TEAM AT ESI MEDICAL COLLEGE DEPLOYMENT · HYDERABAD, INDIA

Building the *intelligence layer* in digital pathology.

From Ki-67 today to comprehensive oncology biomarker coverage tomorrow.

OUR VISION

"To become the intelligence layer in digital pathology — starting with Ki-67 and expanding into broader oncology biomarkers."

A capital-efficient, high-margin infrastructure layer embedded into existing diagnostic ecosystems. Positioned to become a high-value acquisition target as the AI pathology market consolidates. MedMorphIQ will scale by adopting **agentic AI** to bring down the user adoption barrier and enable interactions with our sophisticated AI models via plain natural language.

- ✓ Granted U.S. patent — strong IP moat
- ✓ Active deployments across 5 global institutions
- ✓ Peer-reviewed, published methodology

REGULATORY PATHWAY

CLASS II

Software classified as SaMD (likely Class II) — designed for integration, not replacement of clinical judgment.

HITL

Expert supervision safeguards built in by design to reduce risk and support appropriate FDA classification.

FDA

Exploring appropriate FDA clearance pathway with advisors — pathway selection actively underway.

GO-TO-MARKET STRATEGY

1 INITIAL

Targeted outreach to pathology labs with workflow bottlenecks — fastest path to traction and early revenue.

2 SCALE

Channel partnerships with lab networks and healthcare platforms for broad, scalable distribution without heavy sales overhead.

3 LONG-TERM

Fully embedded into existing diagnostic ecosystems as the **standard AI-powered biomarker intelligence layer** across oncology — with agentic capabilities enabling natural language interactions for any lab user.

GROWTH & EXIT PATHWAYS

STRATEGIC M&A · 3-5 YEARS

Acquisition by diagnostic labs, AI pathology companies, or healthcare platforms seeking proven, patent-protected workflow integration technology.

PLATFORM SCALE STRATEGY

Build a capital-efficient, high-margin AI infrastructure layer via channel partnerships — our agentic AI roadmap reduces onboarding friction and expands the addressable user base beyond technical operators.

The Ask

01

Strategic partnerships in pathology & diagnostics

02

Early pilot expansion & commercial introductions

03

Regulatory strategy — FDA pathway clarity

WHY NOW?

The AI pathology market is consolidating quickly as companies race to control clinical data, daily workflows, and hospital distribution. **MedMorphIQ is positioned to become a high-value integration layer in this shift** — with IP, clinical validation, and deployments already in place.

Let's accelerate pathology together.
